

Always choose Stäubli original equipment

Moulds temperature control

100%

ORIGINAL

ALWAYS CHOOSE STÄUBLI ORIGINAL EQUIPMENT

Only the 100% original Stäubli RPL full flow socket / plug pair can guarantee the safety of your plastic injection moulding process.

Stäubli has worked in partnership with plastics processing companies for over 50 years, and has designed and continuously developed the RPL pair specifically for this process.

Stäubli RPL sockets and plugs: 5 advantages that have been making a difference for over 50 years

- 1/ Full flow design enables fluids to circulate freely with no risk of clogging, for optimum productivity.
- 2/ Strengthened ball-lock mechanism and visible connected position for increased safety.
- 3/ Red and blue rings on sockets and plugs enable easy identification of circuits.
- 4/ Unique seal can be replaced quickly by your operators for fast, simple maintenance with no negative impact on productivity.
- 5/ Available in three different diameters and numerous configurations (extensions, bridge pieces...), Stäubli's expertise means that the RPL range meets all your mould control needs.

Stäubli has a global and local sales structure. Your local Stäubli contact is there to support you in the continuous improvement of your manufacturing processes.

The performance and reliability of your production depend on the quality of the products you use: always check that your sockets and plugs bear the original Stäubli mark.

You can only be sure of incident-free operation by systematically connecting only Stäubli RPL sockets and plugs.
